

# Transfer viva: Proof-theoretic Semantics for ILL and beyond

YII Buzoku

Department of Computer Science University College London

May 30, 2024

Yll Buzoku (UCL) P-tS for ILL May 30, 2024

#### Goals for this talk

- To cover the work done in obtaining a proof-theoretic semantics for ILL.
- To highlight some interesting aspects of the results obtained.
- To present an alternative semantics for ILL.
- To discuss my future plans for my PhD.

YII Buzoku (UCL) P-tS for ILL May 30, 2024

#### A natural deduction system for ILL

$$\frac{\Gamma, \varphi \vdash \psi}{\Gamma \vdash \varphi \multimap \psi} \multimap - - \vdash$$

$$\frac{\Gamma \vdash \varphi \multimap \psi}{\Gamma, \Delta \vdash \psi} \multimap - \vdash =$$

$$\frac{\Gamma \vdash \varphi \land \Delta \vdash \psi}{\Gamma, \Delta \vdash \varphi \lor \psi} \otimes - \vdash =$$

$$\frac{\Gamma \vdash \varphi \land \Delta \vdash \psi}{\Gamma, \Delta \vdash \varphi \lor \psi} \otimes - \vdash =$$

$$\frac{\Gamma \vdash \varphi \land \Delta \vdash \psi}{\Gamma, \Delta \vdash \varphi} \otimes - \vdash =$$

$$\frac{\Gamma \vdash \varphi \land \Delta \vdash \psi}{\Gamma \vdash \varphi \lor \psi} \otimes - \vdash =$$

$$\frac{\Gamma \vdash \varphi \land \Delta \vdash \psi}{\Gamma \vdash \varphi \lor \psi} \otimes - \vdash =$$

$$\frac{\Gamma \vdash \varphi \circ \psi}{\Gamma \vdash \varphi \circ \psi} \otimes - \vdash =$$

$$\frac{\Gamma \vdash \varphi \circ \psi}{\Gamma, \Delta \vdash \chi} \oplus - \vdash =$$

## A natural deduction system for ILL (cont.)

Yll Buzoku (UCL) P-tS for ILL May 30, 2024

#### Alternative systems

One may consider other natural deduction systems.

YII Buzoku (UCL) P-IS for ILL May 30, 2024

## Alternative systems

- One may consider other natural deduction systems.
- The exponential has two rules only in the system of Negri:

$$\frac{(!\,\varphi)^{m},\Gamma\vdash\chi\qquad\Delta_{1}\vdash!\,\psi_{1}\ldots\Delta_{n}\vdash!\,\psi_{n}\qquad !\,\psi_{1},\ldots,!\,\psi_{n}\vdash\varphi}{\Gamma,\Delta_{1},\ldots\Delta_{n}\vdash\chi}\,!\text{-I}$$

$$\frac{\Gamma\vdash!\,\varphi\quad\Delta,\,\varphi\vdash\psi}{\Gamma,\Delta\vdash\psi}\,!\text{-E}$$

#### Substructural atomic derivability

#### Definition (Basic rules)

Basic rules take the following form:

$$\{(P_{1_i} \Rightarrow q_{1_i})\}_{i=1}^{l_1}, \dots, \{(P_{n_i} \Rightarrow q_{n_i})\}_{i=1}^{l_n} \Rightarrow r$$

#### where

- Each  $P_i$  is an atomic multiset, called a premiss multiset.
- Each  $q_i$  and r is an atomic proposition.
- Each  $(P_i \Rightarrow q_i)$  is a pair  $(P_i, q_i)$  called an atomic sequent.
- Each collection  $\{(P_{i_1} \Rightarrow q_{i_1}), \ldots, (P_{i_{l_i}} \Rightarrow q_{i_{l_i}})\}$  is called an atomic box.

## Substructural atomic derivability

#### Definition (Basic derivability relation)

The relation of derivability in a base  $\mathcal{B}$ , is defined inductively as so:

Ref 
$$p \vdash_{\mathscr{B}} p$$

App Given that  $(\{(P_{1_i} \Rightarrow q_{1_i})\}_{i=1}^{l_1}, \dots, \{(P_{n_i} \Rightarrow q_{n_i})\}_{i=1}^{l_n} \Rightarrow r) \in \mathcal{B}$  and atomic multisets  $C_i$  such that the following hold:

$$C_i$$
,  $P_{i_j} \vdash_{\mathscr{B}} q_{i_j}$  for all  $i = 1, ..., n$  and  $j = 1, ..., l_i$ 

Then  $C_1$ ,  $\cdots$ ,  $C_n \vdash_{\mathscr{B}} r$ .

- (At)  $\Vdash^{\perp}_{\mathscr{B}} \rho$  iff  $L \vdash_{\mathscr{B}} \rho$
- $(\otimes) \qquad \Vdash_{\mathscr{B}} \varphi \otimes \psi \qquad \text{iff} \qquad \text{for any } \mathscr{C} \text{ such that } \mathscr{B} \subseteq \mathscr{C}, \text{ atomic multisets } K$   $\text{and any } p \in \mathbb{A}, \text{ if } \varphi \text{ , } \psi \Vdash_{\mathscr{B}}^K p \text{ then } \Vdash_{\mathscr{C}}^{L_jK} p$
- $\begin{array}{ll} \text{(1)} & \ \parallel^{\mathcal{L}}_{\mathscr{B}} \text{1} & \text{iff} & \text{for any } \mathscr{C} \text{ such that } \mathscr{B} \subseteq \mathscr{C}, \text{ atomic multisets } K \\ & \text{and any } p \in \mathbb{A}, \text{ if } \ \parallel^{K}_{\mathscr{B}} p \text{ then } \ \parallel^{L_{\mathscr{C}} K} p \end{array}$
- $(\top)$   $\Vdash^{\perp}_{\mathscr{B}} \top$  iff always

- $(\tt,) \qquad \stackrel{\mid L}{\mathscr{B}} \Gamma \, \tt, \, \Delta \qquad \text{iff} \qquad \text{there exists multisets $K$ and $M$ such that $L=K$ , $M$ and <math display="block"> \stackrel{\mid L}{\Vdash K} \Gamma \, \text{ and } \stackrel{\mid L}{\Vdash M} \Delta$

## Notes on $\mathbb{H}_{\mathscr{B}}$

- $\blacksquare \text{ The sequent } \langle \Gamma, \phi \rangle \text{ is said to be valid if and only if } \Gamma \Vdash_\varnothing^\varnothing \phi \text{ holds.}$
- We frequently write this as  $\Gamma \Vdash \varphi$ .

# Notes on $\mathbb{H}_{\mathscr{B}}$

- $\blacksquare \text{ If } \Vdash_{\mathscr{R}}^{L} \phi \text{ then for all } \mathscr{C} \supseteq \mathscr{B} \text{ we have } \Vdash_{\mathscr{C}}^{L} \phi.$
- Given  $\Gamma \Vdash^{\mathcal{L}}_{\mathscr{B}} \varphi$  and  $\Vdash^{\mathcal{K}}_{\mathscr{B}} \Gamma$ , then it holds that  $\Vdash^{\mathcal{L}_{\mathfrak{P}} K}_{\mathscr{B}} \varphi$ .

## Why the extension to Inf?

- Up until now, all Base-extension Semantics have had a simple (Inf) clause.
- For example in IMALL, it suffices to take the following:  $\Gamma \Vdash^{\mathcal{L}}_{\mathscr{Q}} \varphi$  iff for all  $\mathscr{C} \supseteq \mathscr{B}$  and  $K, \Vdash^{\mathcal{K}}_{\mathscr{Q}} \Gamma$  implies  $\Vdash^{\mathcal{L},\mathcal{K}}_{\mathscr{Q}} \varphi$

Yll Buzoku (UCL) May 30, 2024

Why the extension to Inf?

Question: Is this still an inferentialist semantics?

YII Buzoku (UCL) P-4S for ILL May 30, 2024 12

#### Can we better understand the exponential?

- $\blacksquare \ ! \ \phi \Vdash \phi \otimes \ldots \otimes \phi$
- $\blacksquare \Vdash_{\mathscr{B}}^{L} !(\phi \& \psi) \text{ iff } \Vdash_{\mathscr{B}}^{L} ! \phi \otimes ! \psi$

$$!\,\phi \Vdash \phi \otimes \ldots \otimes \phi \text{ iff }$$

for all bases  $\mathscr{B}$  and atomic multisets L, such that  $\Vdash_{\mathscr{B}}^{\underline{L}} ! \varphi$  then

$$\Vdash^{L}_{\mathscr{B}}\phi\otimes\ldots\otimes\phi$$

Yll Buzoku (UCL) May 30, 2024

Considering the case when  $\varphi = p$  for simplicity we get the following:

YII Buzoku (UCL) P-tS for ILL May 30, 2024 16

Considering the case when  $\varphi = p$  for simplicity we get the following:

■ Given a base  $\mathscr{B}$  such that  $\vdash_{\mathscr{B}} p$  and  $L = \varnothing$ .

Yll Buzoku (UCL) P-tS for ILL May 30, 2024 1

Considering the case when  $\varphi = p$  for simplicity we get the following:

- Given a base  $\mathscr{B}$  such that  $\vdash_{\mathscr{B}} p$  and  $L = \varnothing$ .
- Then we have that  $\Vdash^{\perp}_{\mathscr{B}} p \otimes \ldots \otimes p$ .

Considering the case when  $\varphi = p$  for simplicity we get the following:

- Given a base  $\mathscr{B}$  such that  $\vdash_{\mathscr{B}} p$  and  $L = \varnothing$ .
- Then we have that  $\Vdash^{\mathcal{L}}_{\mathscr{B}} p \otimes \ldots \otimes p$ .
- Examples of such bases:
  - $\blacksquare \mathscr{B} = \{\varnothing \Rightarrow p\}$
  - $\blacksquare \mathscr{B} = \{\varnothing \Rightarrow q, \ q \Rightarrow p\}$

Considering the case when  $\varphi = p$  for simplicity we get the following:

- Given a base  $\mathscr{B}$  such that  $\vdash_{\mathscr{B}} p$  and  $L = \varnothing$ .
- Then we have that  $\Vdash^{\mathcal{L}}_{\mathscr{B}} p \otimes \ldots \otimes p$ .
- Examples of such bases:
  - $\blacksquare \mathscr{B} = \{\varnothing \Rightarrow p\}$
  - $\blacksquare \mathscr{B} = \{\varnothing \Rightarrow q, \ q \Rightarrow p\}$

Note that if  $L \neq \emptyset$  then the only way that this relation could hold is if the atoms were derivable from within the base, i.e. if were valid  $\Vdash_{\mathscr{B}}^{\emptyset} L$ .

So ultimately,  $\Vdash_{\mathscr{B}}^{\varnothing} p \otimes \ldots \otimes p$ .

Inferring from  $! \varphi$  should imply that  $\Vdash_{\mathscr{B}}^{\varnothing} \varphi$ .

## A proof-theoretic flavour of the!

We now consider the second identity:  $\Vdash_{\mathscr{B}}^{\mathcal{L}}!(\phi \& \psi)$  iff  $\Vdash_{\mathscr{B}}^{\mathcal{L}}!\phi \otimes !\psi$  with  $\psi = \top$ . Furthermore since  $\phi \& \top \equiv \phi$  we go as follows:

```
\begin{split} & \Vdash_{\mathscr{B}} ! \ \varphi \ \text{iff} \ \Vdash_{\mathscr{B}}^{L} ! \ \varphi \otimes ! \ \top \\ & \text{iff for all } \mathscr{C} \supseteq \mathscr{B}, K \ \text{and} \ p \in \mathbb{A}, ! \ \varphi \ , ! \ \top \Vdash_{\mathscr{C}}^{K} p \ \text{implies} \ \Vdash_{\mathscr{C}}^{L,K} p \\ & \text{iff for all } \mathscr{C} \supseteq \mathscr{B}, K \ \text{and} \ p \in \mathbb{A}, \\ & \text{if ( for all } \mathscr{D} \supseteq \mathscr{C}, \ \text{if} \ \Vdash_{\mathscr{D}}^{\mathscr{D}} \varphi \ \text{and} \ \Vdash_{\mathscr{D}}^{\mathscr{C}} \top \ \text{then} \ \Vdash_{\mathscr{D}}^{K} p) \ \text{then} \ \Vdash_{\mathscr{C}}^{L,K} p \\ & \text{iff (for all } \mathscr{D} \supseteq \mathscr{C}, \ \text{if} \ \Vdash_{\mathscr{D}}^{\mathscr{D}} \varphi \ \text{then} \ \Vdash_{\mathscr{C}}^{K} p) \ \text{then} \ \Vdash_{\mathscr{C}}^{L,K} p \end{split}
```

YII Buzoku (UCL) P-IS for ILL May 30, 2024 1

■ The most convincing hypothesis was that  $\Vdash^{\mathcal{L}}_{\mathscr{B}}$ !  $\varphi$  iff  $L = \emptyset$  and for all  $\mathscr{C} \supseteq \mathscr{B}$ , atomic multisets K and atoms p, if  $\varphi \Vdash^{K}_{\mathscr{C}} p$  then  $\Vdash^{K}_{\mathscr{C}} p$ .

YII Buzoku (UCL) P-tS for ILL May 30, 2024 1

- The most convincing hypothesis was that  $\Vdash_{\mathscr{B}}^{L} ! \varphi$  iff  $L = \emptyset$  and for all  $\mathscr{C} \supseteq \mathscr{B}$ , atomic multisets K and atoms p, if  $\varphi \Vdash_{\mathscr{C}}^{K} p$  then  $\Vdash_{\mathscr{C}}^{K} p$ .
- This however fails to be complete as it requires us to be able to prove from  $L \vdash_{\mathscr{B}} (! \varphi)^{\flat}$  that  $L = \varnothing$ , to pass Proposition 31.

YII Buzoku (UCL) P-tS for ILL May 30, 2024 1

- The most convincing hypothesis was that  $\Vdash^{L}_{\mathscr{A}} ! \varphi$  iff  $L = \emptyset$  and for all  $\mathscr{C} \supseteq \mathscr{B}$ , atomic multisets K and atoms p, if  $\varphi \Vdash_{\mathscr{C}}^K p$  then  $\Vdash_{\mathscr{C}}^K p$ .
- This however fails to be complete as it requires us to be able to prove from  $L \vdash_{\mathscr{B}} (! \varphi)^{\flat}$  that  $L = \varnothing$ , to pass Proposition 31.
- Attempts to generalise this by replacing  $L = \emptyset$  with  $\mathbb{P}^{\emptyset}_{\mathbb{Z}}$  L fail for the same reason.

Yll Buzoku (UCL) May 30, 2024

- The most convincing hypothesis was that  $\Vdash^{\mathcal{L}}_{\mathscr{B}}$ !  $\varphi$  iff  $L = \emptyset$  and for all  $\mathscr{C} \supseteq \mathscr{B}$ , atomic multisets K and atoms p, if  $\varphi \Vdash^{K}_{\mathscr{C}} p$  then  $\Vdash^{K}_{\mathscr{C}} p$ .
- This however fails to be complete as it requires us to be able to prove from  $L \vdash_{\mathscr{B}} (! \varphi)^{\flat}$  that  $L = \varnothing$ , to pass Proposition 31.
- Attempts to generalise this by replacing  $L = \emptyset$  with  $\Vdash_{\mathscr{B}}^{\emptyset} L$  fail for the same reason.
- A different attempt, based on a notion of closure was to define  $\Vdash^L_{\mathscr{B}} ! \varphi$  iff for every K, p and  $\mathscr{C} \supseteq \mathscr{B}$  if we have  $\varphi \Vdash^K_{\mathscr{C}} p$  then  $\Vdash^L_{\mathscr{C}} p$  and  $\neg \forall \neg M (\Vdash^M_{\mathscr{B}} \varphi \neg \Rightarrow \neg \Vdash^M_{\mathscr{B}} M)$  also fails as there is no way to prove the conclusion of the second conditional.

YII Buzoku (UCL) P-IS for ILL May 30, 2024 19

#### The idea of a zoned semantics

Not absurd to distinguish basic sentences based on whether they are to be used as a hypothesis in an intuitionistic or a resourceful way.

Yll Buzoku (UCL) P-tS for ILL May 30, 2024 2

#### The idea of a zoned semantics

- Not absurd to distinguish basic sentences based on whether they are to be used as a hypothesis in an intuitionistic or a resourceful way.
- Thus we define a new type of basic rule that lookds something like this:

$$[P_1; C_1] \qquad [P_n; C_n]$$

$$\vdots \qquad \vdots$$

$$\frac{q_1}{r} \qquad \frac{q_n}{r} \Re$$

#### Exploring the zoned semantics

#### Definition (Zoned basic derivability relation)

The relation of derivability in a base  $\mathcal{B}$ , is defined inductively as so:

Ref 
$$S$$
;  $T \vdash_{\mathscr{B}} p$  iff  $(p \in S \text{ and } T = \emptyset)$  or  $T = [p]$ .

App Given that

$$(\{(P_{1_i}; C_{1_i} \Rightarrow q_{1_i})\}_{i=1}^{l_1}, \dots, \{(P_{n_i}; C_{n_i} \Rightarrow q_{n_i})\}_{i=1}^{l_n} \Rightarrow r) \in \mathcal{B}$$
 and atomic multisets  $G$  and  $C_i$  such that the following hold:

$$G, P_{i_i}; L_i, C_{i_i} \vdash_{\mathscr{B}} q_{i_i}$$
 for all  $i = 1, ..., n$  and  $j = 1, ..., l_i$ 

Then 
$$G$$
;  $L_1$ ,  $\cdots$ ,  $L_n \vdash_{\mathscr{B}} r$ .

## Exploring the zoned semantics

- $\blacksquare \Vdash_{\mathscr{B}}^{G;L} p \text{ iff } G; L \vdash_{\mathscr{B}} p$
- $\blacksquare \Vdash_{\mathscr{B}}^{G;L} \Gamma \ , \ \Delta \ \text{iff there exists} \ L = U \ , \ V \ \text{such that} \ \Vdash_{\mathscr{B}}^{G;U} \Gamma \ \text{and} \ \Vdash_{\mathscr{B}}^{G;V} \Delta$
- $\Vdash_{\mathscr{B}}^{G;L}$ !  $\varphi$  iff for every base  $\mathscr{C} \supseteq \mathscr{B}$ , atomic multisets h, K and atom p, such that  $\varphi$ ;  $\cdot \Vdash_{\mathscr{C}}^{H;K} p$  hold, then  $\Vdash_{\mathscr{C}}^{G,H;L,K} p$ .
- $\Gamma$ ;  $\Delta \Vdash_{\mathscr{B}}^{G;L} \varphi$  iff for every  $\mathscr{C} \supseteq \mathscr{B}$  and atomic multisets H, K such that  $\Vdash_{\mathscr{C}}^{H;\mathcal{D}} \Gamma$  and  $\Vdash_{\mathscr{C}}^{G,H;L,K} \Delta$  then  $\Vdash_{\mathscr{C}}^{G,H;L,K} \varphi$

#### Some other work undertaken

- Investigated alternative IPL support relations that are more "resource"-aware.
- Started investigating translations between Sandqvist's semantics for IPL and the semantics presented here for ILL.
- Very recently, I have been working on a Base-extension semantics for Lambek Calculus.

YII Buzoku (UCL) P-tS for ILL May 30, 2024 2

#### Future directions of work

- Study how rules are generally translated from Sandqvists bases for IPL to the bases I presented here.
- Give a Proof-theoretic Semantics for Classical Linear Logic.
- Similarly, study other similar logics such as DILL, FILL and what happens when we have subexponentials.
- Give a categorical interpretation of the semantics presented herein.
- Investigate the connection to Linear Logic programming.
- Develop a connection to the Kripke semantics of Miller for his fragment of ILL.

YII Buzoku (UCL) P-tS for ILL May 30, 2024 24 2

## Thank you!

Thank you for listening!
